

VALTRIX High-Purity Pressure Reducers

VALTRIX pressure reducers deliver stable, repeatable outlet pressure for UHP gas applications. The PRE1 series small-flow reducer and PRT1 series connected-diaphragm reducer cover inlet pressures up to 3500 psig with outlet ranges from 0-100 psig and 2-100 psig.

Key features: 316L body, metal diaphragm construction, captured vent for safety, panel-mount option, helium leak tested on every unit.

Typical applications: process tool gas delivery, analytical instrumentation, hydrogen systems, high-purity manifolds.

	Description	Outlet range
	Small-flow reducer, FMR4 connections	2-100 psig
	Connected-diaphragm reducer	0-100 psig
	High-pressure inlet to 3500 psig	per spec
